

EVADO FOR DEVICES MANUFACTURERS

Evado's award winning cloud based app has been tailored for device manufacturer's studies and trials. Evado is an intuitive clinical research subscription service that is easy to customise and requires minimal training. Evado supports clinical trials, patient registries, post market surveillance, and patient monitoring studies. Users save resources by collecting and managing their clinical data in a single platform that complies with FDA Part 11, GCP, GPDR and HIPAA.

Evado's patented form system supports thousands of form layouts and all form field values can be directly queried using standard SQL. Study data can be captured on either a mobile device or a desktop. Users can run multiple clinical projects on the one application. Evado provides implant visit scheduling for device studies, so that all follow up visits reference the date the prosthetic was implanted. Adverse and Serious Adverse events can easily be collected and reviewed on line and data can be forwarded to the relevant reporting agency in a timely manner.

Costs are minimised because Device Manufacturers just pay for the modules they wish to include in their trials and studies. Optional modules include:

- **e-Informed Consent** module ensures that patients are fully informed before they consent to participate in the trial or study. Industry figures demonstrate that patients are much more likely to complete the study if they use an e-consent app. Evado e-Informed Consent can be operated on either a mobile device or desktop with in-built compliance monitoring for regulatory audits. Videos and quizzes are included to enhance patient comprehension. Evado's compliant signature collection meets current global regulatory requirements..
- **Randomisation** module provides a multi-cohort, stratified, block randomisation process, that can be used in any research project.

Evado for Devices

- **Study specific questionnaires** can include standard data collection instruments, that can be circulated to patients anonymously or filled in when the patient visits the clinic to provide scheduled patient outcome follow ups.
- **Patient Recorded Observation (PRO)** module, provides a patient friendly environment for recording ongoing observations or questionnaires pertaining to the patient's clinical outcomes or ongoing care.
- **Visit Reminder** module enables sites to contact the patient by email with a reminder to attend the clinic or to fill out a questionnaire.
- **Evado Integration Services** module provides a web service based integration with Evado's subscription service to enable users to integrate the study and registry data across multiple business applications.
- **Post Market Surveillance (PMS) studies and Post Authorisation Safety Studies (PASS)** can combine standard data collection with both questionnaires and PRO modules to monitor patients ongoing wellbeing.

The Evado Clinical subscription service provides a single cloud based app for designing and managing clinical trials, studies and registries. The Evado customer support team aims to solve all customer queries first time and usually within hour of receiving the support request. Evado's transparent pricing allows customers to take control as they only need to purchase the specific modules and services they need.
