

Evado Clinical, a Melbourne-based digital mobile and data integration company that has provided mobile enabled solutions for more than 30 years.

Evado Health is an integrated platform for delivering a variety of different health solutions to patients in the community or their home, while giving their health care team real time access to charted data.

Evado Health is an AI enabled data rich solution that can be used to create a diverse set of specific health applications.

#### **Benefits:**

- Quick and easy to a service solution,
- Simplifies clinical record management,
- Easy creation and completion of clinical records,
- Patient privacy is fully integrated into the platform,
- Empowers patients to actively participate on their healthcare,
- Patient care charting at home with realtime alerts to clinicians,
- Patient and clinicians see the same realtime data.

While **Evado Health** can be used in clinic its focus is to provide a platform for designing and delivering in home point of care solutions. With a primary focus on managing the care of patients with chronic disease in the home.

#### **Evado Health** in home point of care management:

- enables clinical teams review patient records online,
- eliminates the need to chart patient care on paper that can be damaged, lost and not immediately available to the clinician,
- improves the charting of patient care,
- improves drug compliance.

**Evado Health** has a configurable patented data management platform enables the creation specific health solutions, thereby streamlining the development and delivery of web or mobile Health Apps.

- **Care Management** is provided using a flexible, powerful, scalable tools for planning and charting of patient health care, enabling health care professions to track the progress of chronic or recovering patient.
- **Standardises** the common functionality for planning and charting patient care and records drug usage.
- **Provides** data driven infrastructure so that the solution provider can concentrate on the specific functionality of the service being developed, without having to worry about all of backend processing.

## Evado Health - Data Sheet -

- **Integrates** Evado's cloud-based technology has been used for over 10 years to provide a strategic solution for bringing new services online quickly and economically while minimising the overall solution risk.
- **Delivers** a flexible, powerful, scalable platform for the fast design, development and delivery of web and mobile device Apps.

### ***The platform***

The core of **Evado Health** is a record repository that:

- schedule patient care then monitors its delivery of patient care,
- in built alerts notify both the patient and health practitioners of changes in the patient's condition,
- privacy management controls access to all patient records,
- can handle thousands of records layouts,
- each record layout can have thousands of record fields,
- each record layout is versioned as needed, without affecting any of the existing data,
- can collect millions of records for each version of each record layout,
- IA based analytics to view and observe patient trends.

Surrounding this core are the services including user authentication, user access control, user logging privacy management, care planning and auditing, record design and record collection and the viewing and display of data.

The platform can define and collect virtually any type of medical record and store its content in a secure extendable form, while enabling the data to be queried and analysed that effectively provides the service provider with a query-able repository of patient information.

The front-end of Evado Health is provided by the Evado patented mobile application architecture providing a fully mobile enabled solution delivering universal access to all users regardless of the device they are using. This enables the application to deliver the same page content to both web and mobile device users.

By providing a common set of services used by the health sector, the Evado Health platform provides an online highly configurable environment for quickly designing, developing, and delivering a mobile health solution.

Evado Health features include operational and content reporting, dashboards for various user roles, process scheduling, notifications that can be displayed to various user roles and mobile device clients that can integrate with device components like camera, GPS etc.

Evado Health includes a web service to integrate the platform with external systems and data sources.

The backend architecture is designed to enable specific customer features by adding customised processing components that can be included into their specific environment.

Evado Health has an online analytics and reporting module, so that application developers can define analytic queries that can be displayed as charts or diagrams.

### ***Prototyping and release***

A large part of the risk when creating a new health service is determining whether the data collection and user interaction will work with the intended audience. Using Evado Health the service developer can prototype their solution to verify that their concept works.

Once the concept is proven, the prototyped can be updated, application specific web and mobile clients can be created, to provides a unique user experience while using standardised backend systems.
